

 OK Token

Whitepaper

Introduction

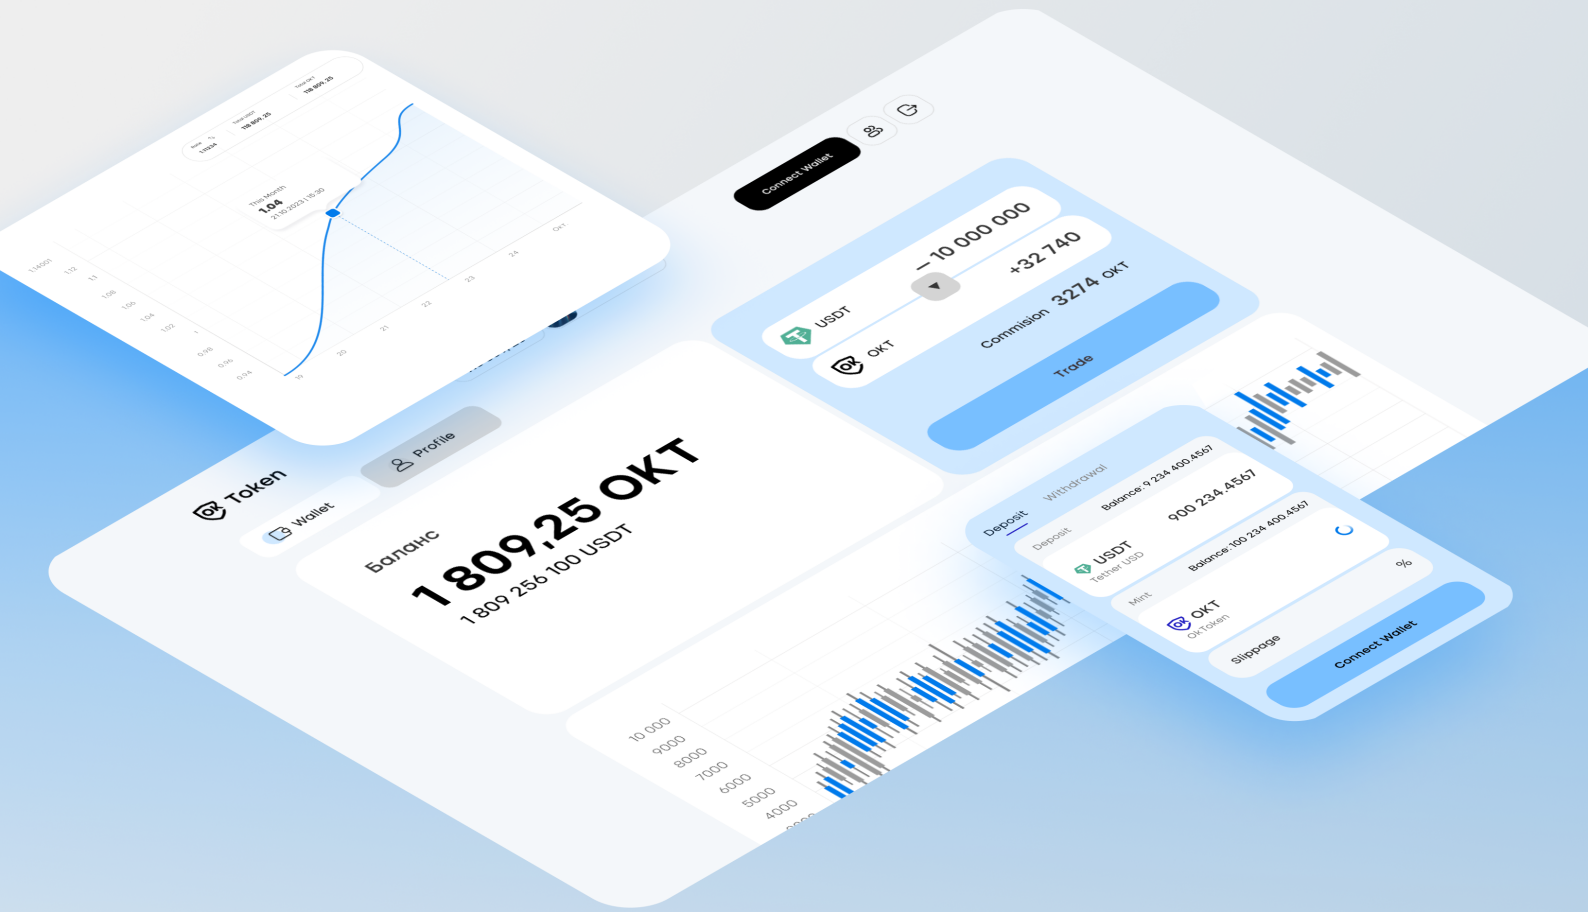

Introducing OKToken - a new stage in the evolution of cryptocurrencies, focused on stability, transparency and sustainable growth.

OKToken is not just another token on the market; it is an innovative tool that ensures its value either grows or stays in place, but never falls. Through a unique system, our platform provides a mechanism that automatically adapts the token's exchange rate based on active transactions and balance sheet, creating a safe space for investors looking for sustainable and reliable tools to grow their capital.

Basic Structure

OKToken is a smart contract, which is a non-transferable ERC20 token (which cannot be transferred, using transfer and transferFrom functions), in which it is possible to invest USDT with automatic subsequent rate update).

Working Mechanism

Buying OKToken

When a user decides to buy OKToken, he/she makes a deposit in USDT to the OKToken smart contract. An 11% commission is deducted from this amount (1% goes as profit to the developers and the other 10% stays on the OKToken balance). After that, OKToken is credited to the user's wallet at the current exchange rate. The purchase can be made for an amount not exceeding the current liquidity, the minimum purchase price is 10 USDT. After the purchase, the client gets a «Deposit», the next purchase will be another «Deposit» (they are not summarized). The maximum amount of one-time deposit is equal to the amount of liquidity or 200000 USDT (the limitation applies when the amount of liquidity exceeds 200000 USDT).

Selling OKToken

For customer convenience and predictability within our innovative platform, we have implemented a new automatic deposit closing mechanism that maximizes the benefit and convenience for our users.

- 1) when buying OKToken for 100 USDT - less 11% commission, 89 USDT will be deposited in the deposit.
 - 2) the deposit remains open until 20% of net profit (or 50% of profit before deducting commission).
 - 3) when the amount at the exchange rate is 133.5, the deposit will be automatically closed.
 - 4) after deducting the withdrawal fee (also 11%) - your wallet will receive 120 USDT.
- Thus, you will get 20% net profit (and 50% profit, without commission).
Finally you will receive 120 USDT, after all fees.

When closing a deposit, tokens are automatically burned, which helps maintain the stability and value of our ecosystem. Funds from the OKToken vault in the form of USDT are automatically transferred to your wallet. The contract allows you to complete deposits that have reached the profitability point on behalf of any address (which ensures the independence of the system).

You do not need to monitor the market and manually close positions. The system will do it for you.

All operations are performed through smart contracts, which eliminates the human factor and provides full transparency.

This new deposit closing mechanism makes our platform even more attractive to investors, providing convenience, reliability and maximizing returns.

OKToken exchange rate

A key aspect of this system is the constant updating of the OKToken exchange rate against USDT. The exchange rate is calculated by dividing the USDT balance on the OKToken smart contract by the total number of OKToken in circulation. Thanks to this mechanism, the OKToken price can either increase or remain stable, but never decrease.

This unique operating mechanism provides confidence to investors in the stability and growth of their investments.

OKToken advantages

Based on its unique working mechanism, OKToken offers a number of significant advantages that differentiate our project in the cryptocurrency market

Stability and Growth

Thanks to a built-in mechanism, the price of OKToken either rises or stays at the same level. This ensures investors that their capital is safe from sudden drops.

Transparency

All transactions conducted through OKToken are trustworthy and verifiable. Users can track all transactions and rate changes in real time.

Automated Transactions

The OKToken buying and selling process is automated and optimized for maximum user convenience.

Limited Commission

The commission collection system is transparent and predictable. Users always know exactly how much they will pay when buying or selling a token.

Decentralization

Despite automation, OKToken retains the principles of decentralization. No one party controls the entire process, which ensures that there is no manipulation.

These advantages make OKToken an ideal choice for investors looking for a reliable and innovative solution in the world of cryptocurrencies.

Referral program

1. You need to purchase an OKToken worth 100 USDT or more to receive an affiliate link.
 2. After fulfillment of the purchase condition, a link will appear in your personal cabinet, which you can send as an invitation to other users.
- Users registered through this link will be automatically assigned to you and will generate your additional income from partnership with the project.

How does it work?

The affiliate program has 3 levels.

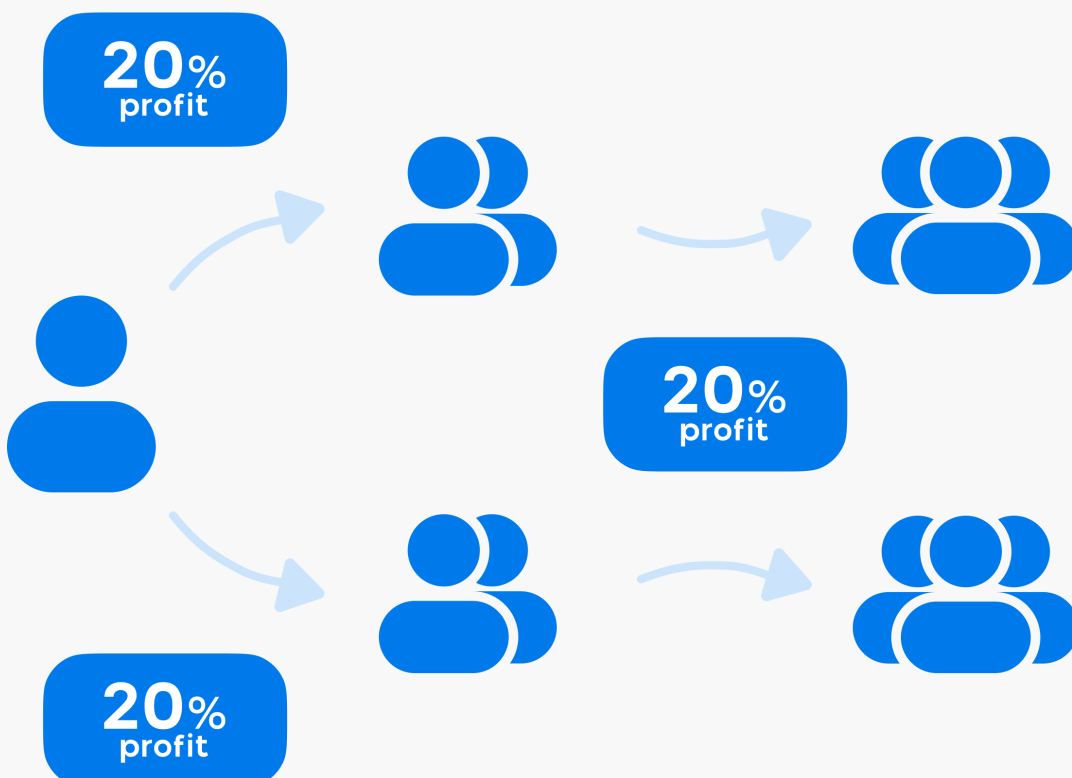

Let's imagine that you send an affiliate link and a purchase of 10000 USDT is made through it.

Based on the algorithm of the token, the project receives 1% of this amount, and you as a partner of the 1st level receive 20% of the profit from the earnings of the project, that is \$20

Your referred client also receives an affiliate link and sends it to another customer who buys Ok Token for 10000 USDT.

The project gets 1% of the purchase amount, you as a 2nd level partner get 20% of the income of the 1st level partner you referred (from the amount of 10000 USDT the income of the 1st level will be 30 USDT, the income of the 2nd level in this case = 20% of 30 USDT or 6 USDT). Level 3 partner will receive 20% of level 2 income (20% of 6 USDT or 1,2 USDT).

At the 3rd level, a similar calculation takes place, only with 20% of the level 2 partner's income.

Security and Reliability

In the world of cryptocurrencies, security comes first, and OKToken is no exception to this rule.

Constant Update

We are constantly monitoring new threats and security enhancements to ensure that OKToken remains at the forefront of the most secure cryptocurrencies.

Decentralization

OKToken relies on a decentralized network that provides security and protection against centralized attacks or failures.

Transparency

All transactions and operations are easily tracked and verified on the blockchain, giving users confidence in the reliability and integrity of the system.

Smart Contracts

Our smart contracts are professionally designed and have undergone several stages of testing and auditing to ensure their stable and secure operation.

Limited Interference

Only the coefficient for automatic closing of positions is varied, eliminating the possibility of human error or deliberate interference.

OKToken's priority is to protect our users' assets and data. Our goal is to provide a tool that is not only innovative, but also reliable in every aspect.

Flexibility and integration

In the aggressively evolving world of cryptocurrencies, adaptability and the ability to integrate are becoming key success factors. In this context, OKToken demonstrates outstanding results.

ERC20 compatibility

OKToken, based on the ERC20 standard, is compatible with most wallets, apart from standard fund transfer functions (this ensures transparency and reliability of our algorithms).

Adaptation and upgrades

In addition to improvements in the interface and increasing the functionality of services that interact with the smart contract, we are also planning different project cycles on different blockchains with different conditions and benefits.

Training Materials

For the convenience of users and developers, we provide guides and materials on how to use OKToken, making it easily accessible even for those who are new to cryptocurrencies. We understand that for long-term success and sustainable growth, it is necessary not only to provide a quality product, but also to ensure that it is flexible and can be easily integrated with other solutions on the market.

Openness for partnerships

We are always open to collaborate and partner with other projects and companies and are ready to offer unique and flexible terms of cooperation.

Conclusion

In the new era of the digital economy, cryptocurrencies are playing a bigger and bigger role, and blockchain capabilities offer unique advantages for innovation and development. OKToken is not just another token on the market, it is a product created with special attention to details, security and user needs.

Throughout the project, our goal has been to create not only an efficient but also a convenient tool for investing and trading. We are confident that thanks to the transparency, security and flexibility of our token, it will find its audience and become a valuable asset in every investor's portfolio.

We invite you to join our community, try OKToken in action and see its benefits for yourself. Be among the pioneers of the new era of digital assets!
